

Odoo 19 Salon & Spa Management Suite

Comprehensive Client User Manual & Technical Guide
Version 19.0.1.0 • Complete Workflow & Operational Documentation

1. Executive Summary & Overview

The **Salon & Spa Scheduler for Odoo 19** is a state-of-the-art, end-to-end operational suite engineered specifically for beauty salons, luxury day spas, barbershops, and wellness clinics. It bridges the gap between customer appointment scheduling, multi-step treatment execution, Point of Sale (POS) checkout, beautician tip management, and executive analytical reporting.

By integrating natively into Odoo 19's backend and POS interfaces, this suite eliminates double-bookings, automates customer email confirmations and reminders, accurately calculates beautician commissions and tips, and delivers dynamic visual scheduling.

Key System Highlights:

- **Dynamic Visual Calendar:** Real-time scheduler with drag-and-drop resizing and multi-branch color coding.
- **Adjust Duration Override:** Instantly stretch or contract appointment slots and multi-step timings.
- **Dedicated POS Tip Button:** Cashiers select beauticians right at checkout to log tips automatically.
- **Automated Email Protection:** Guaranteed single confirmation email upon booking plus 30-min reminders.
- **Executive Analytics:** Live dashboard tracking revenue, commissions, ratings, and staff tips.

2. The Interactive Scheduler & Calendar View

The **Scheduler** tab serves as the primary operational hub for front-desk receptionists and salon managers. It displays a multi-column view categorized by active beauticians, therapists, and stylists.

2.1 Multi-Branch Color Coding

To effortlessly manage multi-location operations, every appointment card on the scheduler dynamically inherits the unique color assigned to its branch ('Branch Color'). Receptionists can immediately identify whether a booking belongs to the Downtown branch, Uptown branch, or VIP suite at a single glance without clicking into the record.

2.2 The 'Adjust Duration' Precision Override

Normally, selecting a service (such as *Hair Coloring* or *Facial Treatment*) calculates an automatic duration based on standard service times. However, clients frequently request extra treatment time or customized adjustments.

- **Dynamic Card Resizing:** Using the **Adjust Duration** dropdown (ranging from *15 Minutes* to *4 Hours*) instantly recomputes the appointment's exact End Datetime. On the visual Scheduler, the appointment card expands or contracts vertically to occupy the exact visual time block requested.
- **Multi-Step Synchronization:** If the appointment consists of sequential steps (e.g., *Wash* → *Cut* → *Blow Dry*), adjusting the total duration automatically scales the final treatment step so that the combined duration of all steps precisely equals the target duration.
- **Interactive Drag-and-Drop:** Receptionists can also drag the bottom border of any card directly on the calendar grid. Doing so updates the 'Adjust Duration' setting automatically in real time.

3. Multi-Step Appointment & Booking Workflow

When a client books an appointment via the form or the Quick Create modal, the system enforces a structured status lifecycle to ensure clean operational tracking.

Status	Operational Meaning & Automated Action
Draft	Initial tentative booking created by receptionist. No confirmation emails are sent during this phase, protecting against premature client notifications.
Confirmed	Booking confirmed with client. Automated Action: The system instantly dispatches exactly ONE professional confirmation email ('Booking Confirmed') containing service, staff, and date details.

In Progress	Client has arrived (`Arrived` checkbox set) and treatment is actively underway in the designated treatment room (`salon.room`).
Done	Service completed. Appointment is ready for POS checkout, or has been checked out and finalized.
Cancelled	Appointment cancelled. Slot is freed immediately on the visual calendar.

3.1 Automated Email System & 30-Minute Reminders

To guarantee a seamless customer experience, the suite features a robust two-stage email engine:

1. **Single Confirmation Guarantee:** The system tracks email dispatch using a dedicated security flag (`confirmation\_sent`). Whether an appointment is confirmed upon creation or via the *Confirm* button, exactly one confirmation email is sent.
2. **Automated 30-Minute Reminder Cron:** A background scheduled task runs every 15 minutes, scanning all confirmed appointments scheduled to begin within the next 30 minutes. It automatically emails a gentle reminder (`email\_template\_appointment\_reminder\_30m`) and marks `reminder\_sent\_30m = True` to prevent duplicate alerts.

4. Point of Sale (POS) Checkout & Tip Staff Integration

A standout feature of the suite is the seamless checkout flow between Salon Appointments and the Odoo 19 Point of Sale (POS) terminal.

4.1 The 'Tip Staff' POS Checkout Button

During checkout, clients often wish to leave a gratuity (tip) for their beautician, stylist, or massage therapist via cash or credit card. Cashiers do not need to create complicated manual journal entries or generic tip items. Instead:

- **One-Click Selection:** Cashiers click the custom **Tip Staff** button located directly on the POS control panel.
- **Beautician Selection Modal:** A visual pop-up displays all active salon staff members (`salon.staff`). The cashier selects the specific staff member receiving the tip.
- **Custom Amount Entry:** The cashier inputs the exact tip amount (e.g., \$15.00 or \$50.00).
- **Automated Line Tagging:** The POS attaches a special `Staff Tip` order line tagged with the exact `staff\_id`. When the order is paid and finalized (`Paid / Done`), the backend automatically extracts this line and registers a formal `salon.staff.tip` database record linked to that beautician.

5. Beautician Profiles, Tip Settlement & Commissions

The **Staff Members** module (`salon.staff`) manages each beautician's schedule, allowed treatment capabilities, financial commissions, and tip balances.

Financial Component	Calculation & Settlement Mechanism
---------------------	------------------------------------

Tip Records (`salon.staff.tip`)	Every tip collected in POS generates an individual tip record containing the Date, POS Order Reference, Staff Member, Amount, and Status (`Unpaid` or `Paid`).
Total Unpaid Tips Balance	Each staff profile prominently displays their real-time pending balance (`Total Unpaid Tips`). Managers can view exactly how much gratuity is owed to each beautician at the end of their shift or pay period.
One-Click Payout Settlement	When disbursing cash or payroll tips, salon managers open the tip records and click Mark Paid (`action_mark_paid`). The unpaid balance instantly resets, maintaining a complete audit trail.
Staff Commissions (`salon.commission`)	Configurable commission percentages per service or staff member. When an appointment completes (`Done`), the system calculates the beautician's commission automatically for payroll tracking.

6. The Real-Time Analytical Salon Dashboard

The **Dashboard** tab provides executive visibility into salon performance. With instant date filtering (**All Time**, **Today**, **This Week**, **This Month**), managers can evaluate operational health in real time.

6.1 Dashboard KPI Metrics

- **Total Revenue & Payment Breakdown:** Displays overall gross revenue alongside exact splits between `Paid Revenue` (completed checkouts) and `Unpaid Revenue` (pending treatments).
- **Appointment Volume & Status Distribution:** Shows total bookings and breaks down counts across `Draft`, `Confirmed`, `In Progress`, `Done`, and `Cancelled`.
- **Average Booking Value & Customer Satisfaction:** Calculates average revenue per booking and aggregates client review star ratings (`1 to 5 Stars`).
- **Total Tips & Commission Tracker:** A dedicated financial header displays `Total Tips Collected`, `Paid Tips Disbursed`, and `Pending Unpaid Tips` right alongside staff commission metrics.

6.2 Staff Performance Leaderboard

The bottom of the dashboard features a dynamic leaderboard ranking all beauticians and therapists by revenue generated. For each staff member, it displays their Total Appointments, Completed Treatments, Gross Revenue, Earned Commissions, and **Total Tips Collected**.

7. Additional Advanced Modules & CRM Features

Beyond scheduling and POS, the suite includes powerful supplementary modules for comprehensive salon governance:

- **Room & Station Management** (`salon.room`): Assign specific treatment rooms, massage suites, or styling chairs to appointments to prevent physical double-booking.
- **Client CRM & Treatment History** (`salon.customer.history`): Maintain detailed records of past color formulas, skin sensitivities, treatment preferences, and signed liability consent forms (`consent\_signed`).

- **Memberships & Packages** (`salon.membership``, `salon.package``): Offer recurring monthly VIP memberships or multi-session treatment packages (e.g., *Buy 5 Facials, Get 1 Free*).
- **Client Feedback & Reviews** (`salon.review``): Collect post-appointment star ratings and client reviews to ensure top-tier service quality across all branches.

System Verification & Deployment Status: *All modules, tip calculations, POS checkouts, and automated email confirmations have been fully compiled, upgraded, and verified on Odoo 19 database spa_pos.*
